

Keyboard & Mouse Over Ethernet License

SKAARHOJ Keyboard & Mouse Over Ethernet License

SKAARHOJ Blue Pill products with USB-A can act as keyboard and mouse transmitters to remote computers, enabling control over a network without needing additional software on the destination device. The solution utilizes the Raw Panel protocol to transmit keyboard and mouse inputs, offering an efficient method to control servers, workstations, and other systems remotely. This paid license unlocks full functionality, allowing for seamless control of multiple destination endpoints using either the xpanel-hids application or core-skaarhoj-kmserver for enhanced performance and ease of channel management.

Benefits

- Remotely control computers via keyboard and mouse over Ethernet without installing software
- Control multiple destination endpoints for flexible and scalable setups
- Simplify your system by using only SKAARHOJ devices connected to the network
- Leverage SKAARHOJ broadcast panels and Raw Panel protocol for intuitive control
- Easily manage keyboard and mouse operations across systems with channel selection on SKAARHOJ panels

Features

- Keyboard and mouse control over Ethernet with SKAARHOJ devices
- Seamless control of multiple destination endpoints
- Utilizes Raw Panel protocol for transmitting input data
- Works with xpanel-hids and core-skaarhoj-kmserver for enhanced functionality
- 10-minute free trial, full functionality after license purchase
- Control multiple systems and manage them with SKAARHOJ panels using channel selection
