

Device Core Link (DCLink) License

SKAARHOJ Device Core Link (DCLink) License

The dclink-tcp application for SKAARHOJ products allows users to interface with SKAARHOJ-supported broadcast and AV devices using a simple TCP-based ASCII interface. By translating SKAARHOJ's proprietary intermediate device protocols into human-readable commands, DCLink makes it easier for integrators to control and monitor devices, such as video switchers, PTZ cameras, and video hubs. The solution supports a wide range of devices and provides both 'Get' and 'Set' functionalities. The paid license unlocks the full capabilities of the application, allowing for unlimited use and seamless integration into larger AV systems.

Benefits

- Control and monitor a wide variety of broadcast and AV devices using simple ASCII commands
- Integrate multiple devices into a unified control system
- Access and modify device parameters easily using TCP commands
- Subscribe to changes on specific devices for real-time updates
- Support for legacy devices through 'TCP Link for ATEM' mode

Features

- Human-readable TCP interface for controlling SKAARHOJ devices
- Supports multiple devices, including video switchers, cameras, and video hubs
- Get and set values, subscribe to real-time updates on device parameters
- Run on any SKAARHOJ Blue Pill device
- Supports legacy protocol for ATEM switchers
- 10-minute free trial period, with full functionality unlocked after purchasing a license
- Licensing enables unlimited usage of DCLink on a Blue Pill device, including support for multiple device cores
